Market Review and Fund Strategy

China markets saw another selldown in the month of May following post release of April's economic data. Weaker than expected data showing slowing recovery momentum in China coupled with an absence of policy support further dampened investors' confidence in China's recovery. China's April PMI missed expectations which increased concerns that its economic recovery momentum has failed to sustain. China's April PMI fell to 49.2 from 51.9 in March and 52.6 in February. The year-on-year growth rates of industrial production and retail sales were bumped up by the low comparison base from Shanghai lockdown last year but were slower than expected, particularly for industrial production. Further, labour market recovery remained uneven with youth unemployment surging to a record high of 20.4% despite overall unemployment lower at 5.2%. Policy-wise, PBOC kept the 1-year medium-term lending facility (MLF) rate unchanged at 2.75% in May, the 9th consecutive month that it has been held steady. A second Covid wave in mainland China since Beijing suddenly abandoned its strict policy of COVID-zero in December also sparked concerns near term disruptions to overall economic recovery. However, mobility remained strong indicating continuous economic activity. Geopolitical tensions saw another deepening row following China's ban on the use of Micron's chips citing products pose serious network security risks. US debt ceiling dilemma and unclear resolution also added to global financial market woes. In May, the FED delivered another 25bps hike in the May FOMC. Chair Powell stressed data dependency and that policy moves in future would be decided meeting-by-meeting, suggesting a likely pause ahead. Taiwan's 1Q23 GDP contracted 3.02% yoy contracting for the a second straight quarter driven by continued weakness in exports, weaker than expected government consumption and fixed investment. Private consumption meanwhile continued to show resilience growing 14.2% yoy. Overall IT-heavy Taiwan market bucked the trend following positive sentiment on AI theme following release of Nvidia's guidance. The Dow Jones Greater China Islamic Market Index fell 3.83% in USD terms in May. MSCI China fell 8.73% in USD terms, Hong Kong's Hang Seng index fell 8.12% whilst the Shanghai Shenzhen 300 Index fell 8.38% whilst the Taiwan's stock market rose 6.34% in May. During the month, the Fund fell 0.32%, outperforming the benchmark by 17 bps in the month. Key contributors were overweight positions in selected Technology names in Taiwan that benefitted from positive sentiment on AI.

Fund Review & Strategy

With China's reopening done, recovery remains on track with PMI numbers showing a rebound with mobility data largely back to normal. Mobility and consumption have staged a V-shaped comeback, driven by pent-up demand amid removal of pandemic restrictions but economic data post 1Q23 has shown a slowdown in recovery momentum. China has set an official GDP growth target of 5% for 2023 with a priority to boost domestic demand and build a modern industrial system. Economic policy and regulatory policy are all aligned in a pro-growth fashion. Recovery momentum is being sustained after reopening, as the return of growth-focused policy pragmatism revives business and job confidence. Pro-growth policies including further relaxation for the property sector, improvement in job markets, income growth, and restoration of consumption confidence should support a broad-based resumption of consumption growth. We are long term positive on the Greater China markets of China, Hong Kong and Taiwan. This contrasts with developed markets, where inflation remains elevated resulting in aggressive monetary tightening. We expect the accommodative monetary support in China to stay in place as the country to aid economic and consumption recovery. The government's aim to deliver long-term growth, imply that policymakers will likely promote economic growth beyond the near term, countering intensifying structural headwinds of weaker demographics and slower productivity growth. Fund has increased weight in Taiwan technology sector following bottoming of semiconductor inventory cycle in mid-2023 with the next semiconductor upcycle to begin in 2H23. For China, fund is near term cautious following the sharp slowdown in recovery momentum and soft consumption and housing recovery from China. However, fund continues to believe that China's growth rate will continue at a healthy level that would support long term corporate earnings growth with exit from recovery to expansion. On a relative basis, the Greater China market continues to appear attractive on a price -earnings-growth (PEG) perspective.

Tinjauan dan Strategi Dana

Pasaran China mengalami satu lagi penurunan harga jualan (selldown) pada Mei selepas data ekonomi April dikeluarkan. Data yang lebih lemah daripada jangkaan menunjukkan momentum pemulihan yang perlahan di China ditambah dengan ketiadaan sokongan dasar menyuramkan lagi keyakinan pelabur terhadap pemuliharaan China. PMI April China terlepas jangkaan lalu menambah keimbangan bahawa momentum pemuliharaan ekonominya gagal dikekalkan. PMI April China jatuh kepada 49.2 daripada 51.9 pada Mac dan 52.6 pada Februari. Kadar pertumbuhan tahun ke tahun pengeluaran perindustrian dan jualan runcit meningkat sekoran atas perbandingan yang rendah berikutan sekatan pergerakan Shanghai tahun lepas tetapi lebih perlahaan daripada jangkaan, terutamanya pengeluaran perindustrian. Selanjutnya, pemuliharaan pasaran buruh kekal tidak sekata dengan pengangguran belia melonjak ke paras tertinggi sebanyak 20.4% walaupun pengangguran keseluruhan lebih rendah pada 5.2%. Dari segi dasar, PBOC mengekalkan kadar kemudahan pinjaman jangka sederhana (MLF) 1 tahun tidak berubah pada 2.75% pada Mei, bulan ia kekal stabil selama 9 bulan berturut-turut. Gelombang kedua Covid di tanah besar China sejak Beijing tiba-tiba mengenepikan dasar ketat sifar COVID pada Disember juga mencetuskan keimbangan gangguan jangka pendek terhadap pemuliharaan ekonomi keseluruhan. Walau bagaimanapun, mobiliti yang kekal kukuh menunjukkan aktiviti ekonomi yang berterusan. Ketegangan geopolitik menyaksikan satu lagi jurang perselisihan yang semakin mendalam berikutan larangan China terhadap penggunaan cip Micron yang menyebut bahawa produk tersebut menimbulkan risiko keselamatan rangkaian yang serius. Dilema siling hutang US dan resolusi yang tidak jelas juga menambah masalah pasaran kewangan global. Pada bulan Mei, FED mengumumkan satu lagi kenaikan 25 mata asas semasa FOMC Mei. Pengurus Powell menekankan pergantungan data dan langkah dasar pada masa hadapan akan diputuskan mesyuarat demi mesyuarat, mencadangkan kemungkinan jeda di hadapan. KDNK 1Q23 Taiwan menguncup 3.02% YoY, menguncup menurut suku tahun kedua berturut-turut, didesak oleh kelemahan eksport yang berterusan, penggunaan kerajaan yang lebih lemah daripada jangkaan dan pelaburan tetap. Penggunaan swasta sementara itu terus menunjukkan kemampuan apabila meningkat 14.2% YoY. Keseluruhan pasaran Taiwan yang sarat IT menentang aliran berikutan sentimen positif ke atas tema AI berikutan pelepasan panduan Nvidia. Indeks Dow Jones Greater China Islamic Market jatuh 3.83% dalam terma USD pada Mei. MSCI China jatuh 8.73% dari segi USD, Indeks Hang Seng Hong Kong jatuh 8.12% manakala Indeks Shanghai Shenzhen 300 Index jatuh 8.38% sementara pasaran saham Taiwan meningkat 6.34% pada Mei. Pada bulan tinjauan, Dana jatuh 0.32%, mengatasi penanda aras sebanyak 17 mata asas. Penyumbang utama ialah kedudukan pegangan berlebihan dalam nama Teknologi terpilih di Taiwan yang mendapat manfaat daripada sentimen positif tentang AI.
